PROJECT UPDATE

ENHANCEMENT OF BATTERY POWERED RICKSHAW

PROJECT UPDATES

01 Selection of Components

02 Creating a circuit schematic

03 Arduino Coding and Circuit Implementation

01 COMPONENT SELECTION

▶ **SPEED
CONTROL**

Potentiometer

Provides varying resistance and thereby helps control acceleration,.

▶ **OBSTACLE
DETECTION**

SONAR sensor HC SR 04

Ultrasonic sensor used for non-contact distance measurements

▶ **SOLAR
POWER**

Solar Panel Module

▶ **ARDUINO**

Arduino UNO

▶ **MOTOR
DRIVER**

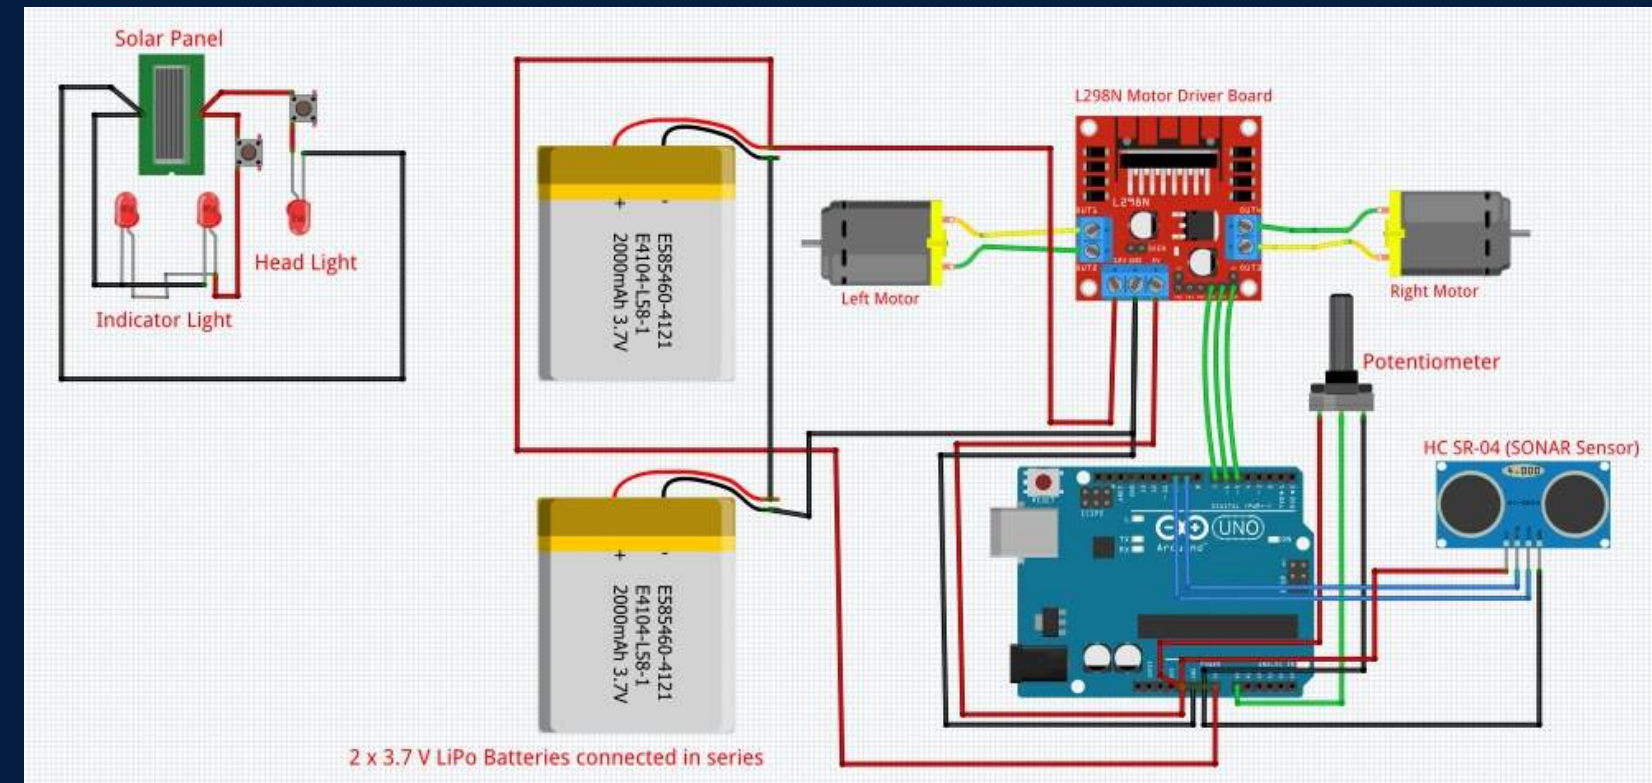

Model L298N

02

CIRCUIT SCHEMATIC

FRITZING CIRCUIT

Using the components we chose, a circuit was built by connecting the components using the Fritzing software.

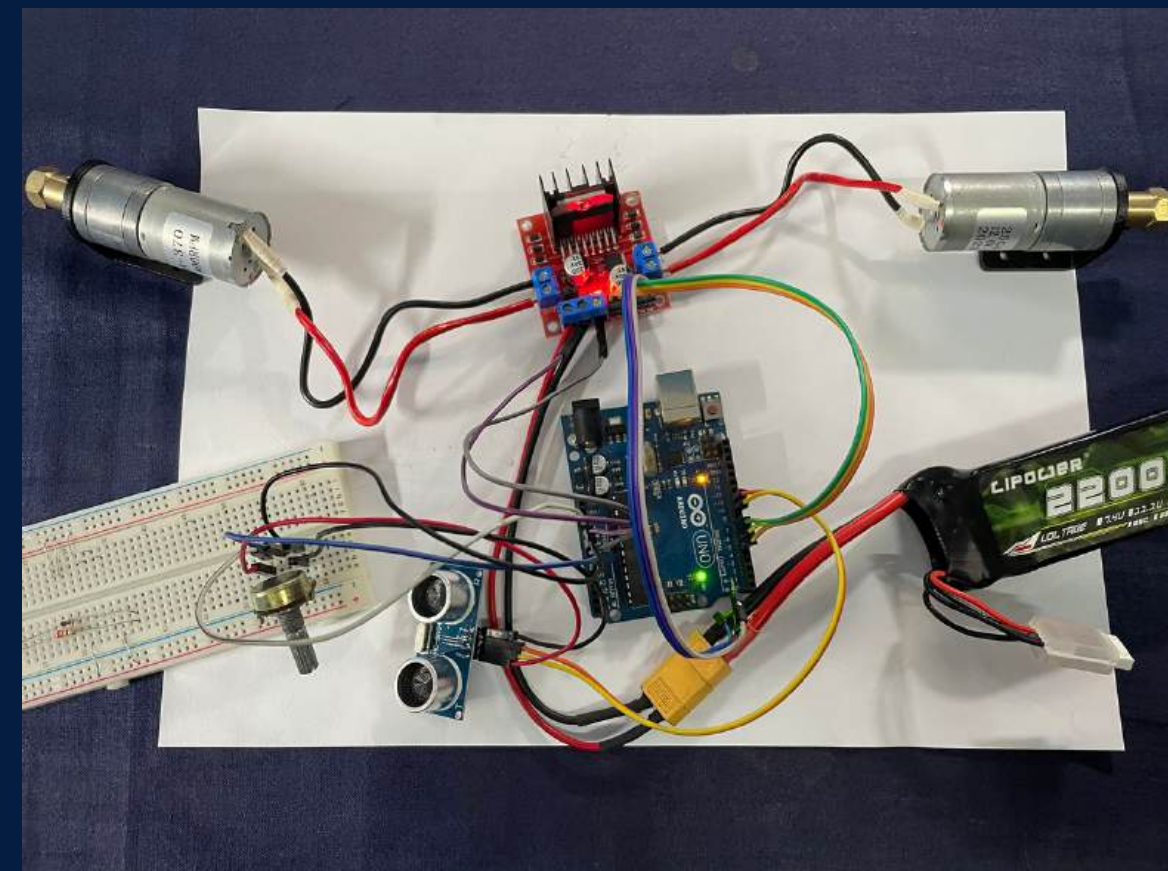

03

ARDUINO CODE AND CIRCUIT IMPLEMENTATION

Arduino Uno is used in the circuit schematic. Necessary codes for the device were prepared to control the components connected to different pins of the UNO.

Implemented circuit is shown

THANK YOU
